

# TVA EnergyRight Incentives

In partnership with your Local Power Company (LPC), the following financial incentives are offered on qualifying equipment purchases to help you reach your energy goals. Please apply for incentives prior to equipment purchases.

- Save money while you make your business and our region greener
- Boost your bottom line—energy upgrades are good for business
- Drive growth while lowering your carbon footprint
- Go to <https://energyright.com/business-industry/incentives/> for details

Take advantage of current incentive offerings to help reduce your company's energy costs and improve workplace sustainability. Please apply for incentives prior to purchasing equipment. Incentives are based on program terms and conditions (see individual incentive links below for details) and are dependent on application approval. Contact your LPC with questions.

## HVAC

Whether you are ready to replace your gas-fired HVAC system or building a new facility, our incentive for HVAC system-utilizing heat pumps can help. Dual fuel heat pumps and variable refrigerant flow systems with variable speed compressors can yield substantial energy savings, help control spikes in seasonal energy use and improve comfort and air quality. Accessible through the PPN, we're offering a \$250/ton HVAC incentive toward the purchase of qualified HVAC LED systems. HVAC incentives are the only incentives that do not require pre-approval. For complete HVAC incentive details please visit:

<https://energyright.com/business-industry/incentives/hvac/>

## LED Lights

Upgrade your interior lighting to lower your energy costs. Making the switch is more affordable with an incentive of \$0.03/kWh towards energy efficient LED upgrades. PPN members utilize the PPEC lighting tool to share information about your project. This incentive is accessible through the TVA PPN. For complete LED incentive details please visit:

<https://energyright.com/business-industry/incentives/led-lights/>

## Forklifts / Non-Road EVs

Lift profitability and lower emissions with electric forklifts. Not only do they have lower operating costs—they require less maintenance. Electric forklifts are quieter and more maneuverable. It pays to go electric. We're offering incentives of \$2,000 toward the purchase of electric forklifts and \$1,000 toward an electric forklift lease. Please note that golf carts are not included in this incentive opportunity. For complete forklift incentive details please visit:

<https://energyright.com/business-industry/incentives/electric-forklifts/>

## Indoor Agriculture

Create optimal growing conditions while using less energy. Growing food crops indoors means no insects, fewer chemicals, faster growth as you can grow crops year-round. We have incentives available for pod/container farms at \$25/sq foot and for vertical farms/warehouses at \$40/ton of air conditioning. For complete indoor agriculture incentive details please visit:

<https://energyright.com/business-industry/incentives/indoor-agriculture/>

## UVGI

Ultraviolet Germicidal Irradiation uses short wavelength UV-C light to inactivate microorganisms. According to the FDA, germicidal lamps have long been used to reduce the spread of bacteria. TVA is offering standard incentives at \$30/ton for duct-mounted UVGI systems, accessible through the PPN. For complete UVGI incentive details please visit:
