Huntsville Utilities Water Department

We are pleased to provide you with this year's Annual Water Quality Report. This publication is our commitment to keep you, our customer, informed on issues related to water service. This report provides information concerning the source of your drinking water, treatment techniques, and testing results, as well as an explanation of the numbers and terms contained in it.

Huntsville Utilities Water Department works diligently to provide high quality water at the lowest possible price. We are

committed to providing a quality drinking water that meets or exceeds all state and federal drinking water standards.

WATER SOURCES

Huntsville Utilities supplies drinking water to approximately 90,000 customers from both surface water and groundwater sources. Surface water from the Tennessee River is processed through two conventional surface water treatment plants, the South Parkway facility and Southwest Treatment Plant. Groundwater is supplied from the Lincoln and Dallas Well Treatment Plant, the Hampton Cove Well Treatment Plant, and Williams Well. All the groundwater wells produce from limestone aquifers.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and radioactive material, and it can pick up substances resulting from the presence of animals or from human activity.

SOURCE WATER ASSESSMENT

In compliance with the Alabama Department of Environmental Management (ADEM), Huntsville Utilities Water Department has developed a Source Water Assessment plan that will assist in protecting our water sources. This plan provides additional information such as potential sources of contamination. It includes a susceptibility analysis, which classifies potential contaminants as high, moderate, or non-susceptible to contaminating the water source. In 2009 we updated the Source Water Assessment. These reports are available for review in our office during normal business hours by appointment.

Please help us make these efforts worthwhile by doing what you can to protect our source water. For example, carefully follow instructions on pesticides and herbicides you use for your lawn and garden, and properly dispose of household chemicals, paints and waste oil. Please inform the Water Department if you observe actions that might compromise the quality of our drinking water.

Action Level - the concentration of a contaminant that, if exceeded, triggers some follow-up action ADEM - Alabama Department of Environmental Management - Alabama's environmental regulatory agency. AWPCA - Alabama Water Pollution Control Association

Coliform Absent (ca) - Laboratory analysis indicates coliform bacteria not present.

Definitions

Disinfection byproducts are formed when disinfectants used in water treatment plants react with natural organic matter present in the source water and produce byproducts.

EPA - Environmental Protection Agency - the nation's environmental regulatory agency.

Initial Distribution System Evaluation (IDSE) - a one-time study conducted by water systems to monitor disinfection byproducts.

Maximum Contaminant Level (MCL) - highest level of contaminant allowed in drinking water.

Maximum Contaminant Level Goal (MCLG) - the level of a contaminant in drinking water below which there is no known or expected risk to health. Millirems per year (mrem/yr) - measure of radiation absorbed by the body. Nephelometric Turbidity Unit (NTU) - a measure of the clarity of water. Not Applicable (NA) - Not applicable to water system because not required.

Non-Detects (ND) - laboratory analysis indicates that the contaminant is not present at a detectable level.

Not Required (NR) - laboratory analysis not required due to waiver. Parts per billion (ppb) or Micrograms per liter ($\mu g/l$) - corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Parts per million (ppm) or Milligrams per liter (mg/l) - corresponds to one minute in two years or a single penny in \$10,000.

Parts per quadrillion (ppq) or Picograms per liter (picograms/l) - corresponds to one minute in 2,000,000,000 years, or a single penny in \$10,000,000,000.

Parts per trillion (ppt) or Nanograms per liter (nanograms/l) - corresponds to one minute in 2,000,000 years, or a single penny in \$10,000,000,000. Picocuries per liter (pCi/L) - a measure of the radioactivity in water. Running annual average (RAA) - the required method of calculating compliance on disinfection byproducts, TTHM and HAA5. Threshold Odor Number (TON) - the greatest dilution of a sample with odor-free water that yields a barely detectable odor. Treatment Technique (TT) - a required process to reduce a contaminant. Variances & Exemptions (V&E) - State or EPA permission not to meet an MCL or a treatment technique under certain conditions.

QUESTIONS?

Public interest and participation in decisions affecting drinking water or other utility issues is encouraged. If you have any questions about this report or concerning your water utility, please contact Jim Reynolds in the Water Quality Lab at (256) 650-6374 or by email at waterlab@hsvutil.org.

If you would like to attend one of our regularly scheduled meetings, you may check our website (www.hsvutil.org) for the meeting schedule. They are usually held on the last Tuesday of every month at 8:00 a.m. at Huntsville Utilities, 112 Spragins Street. Board members include Mr. Stanley Statum, Dr. Dorothy W. Huston, and Dr. James S. Wall. Jr.

More information about contaminants in drinking water and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at (800) 426-4791.

2014 ANNUAL WATER QUALITY REPORT

Testing Performed January - December 2013

HUNTSVILLE UTILITIES WATER DEPARTMENT

Phone (256) 881-6281 Fax (256) 650-6388

Excellence Awards

Huntsville Utilities has been recognized numerous times over the past two decades for outstanding service, receiving several excellence awards. The most recent awards are:

consecutive year!)

- EXCELLENCE
- Southwest Plant
 ADEM 2013 Plant Optimization Award for the South Parkway Plant (2nd consecutive year) and the Southwest Plant (6th consecutive year!)

AWPCA Best Operated Plant Award

AWPCA Award of Excellence for the

for the South Parkway Plant (3rd

Office Hours: Monday - Friday, 8 a.m. to 5 p.m. www.hsvutil.org

Huntsville Utilities

DRINKING WATER INFO

All drinking water, including bottled water, may be reasonably expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. MCL's, defined in a List of Definitions in this report, are set at very stringent levels. To understand the possible health effects described for many regulated constituents, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or from urban storm water run-off, wastewater discharges, oil/gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, storm water run-off, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. People at risk should seek advice about drinking water from their health care providers.

Huntsville Utilities also tests your source water for pathogens, such as Cryptosporidium and Giardia, with no detections. These pathogens can enter the water from animal or human waste. For people who may be immuno-compromised, a guidance document developed jointly by the Environmental Protection Agency and the Center for Disease Control is available online at www.epa.gov/safewater/crypto.html or from the Safe Drinking Water Hotline at (800) 426-4791. This language does not indicate the presence of cryptosporidium in our drinking water.

Huntsville Utilities also tests your source water for unregulated contaminants not listed in the tables contained in this report. Please refer to our website at www.hsvutil.org for results on pharmaceuticals, personal care products, endocrine disruptors, and perchlorate.

Based on a study conducted by ADEM with the approval of the EPA a statewide waiver for the monitoring of asbestos and dioxin was issued. Thus, monitoring for these contaminants was not required.

Water systems using surface sources or groundwater under the influence of surface water must provide a filtration process to produce filtered water turbidity no greater than 0.3 turbidity units (NTU) in 95% of filtered water samples analyzed each month and at no time exceeds 1.0 NTU. Groundwater sources must produce treated water which at no time exceeds 5.0 NTU.

LEAD AND DRINKING WATER

As required by federal and state agencies, we also have an outside laboratory monitor our distribution system for lead. Levels of lead in our system have always been well below the minimum standard. Even though we do not have a problem with lead, the following information about lead is required to be in this report:

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Huntsville Utilities is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking.

If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or on the EPA's website (www.epa.gov/safewater/ lead)

The EPA or ADEM requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. This report contains results from the most recent monitoring which was performed in accordance with the regulatory schedule.

MONITORING SCHEDULE

Contaminants Monitored	Year
Inorganic Contaminants	2013
Lead/Copper	2012
Microbiological Contaminants	current
Nitrates	2013
Radioactive Contaminants	2011
Synthetic Organic Contaminants	2011
Volatile Organic Contaminants	2013
Disinfection Byproducts	2013
Cryptosporidium	2010
Unregulated Contaminants Monitoring Rule 2	2009

Huntsville Utilities has chosen to provide our water customers with a table of all contaminants for which the Environmental Protection Agency and the Alabama Department of Environmental Management require testing.

These contaminants were not detected in your drinking water unless they are also listed in the Table of Detected Drinking Water Contaminants elsewhere in this report.

Contaminant	MCL	Unit of Msmt	Contaminant	MCL	Unit of Msn	
Bacteriological Contaminants	MOL	onit of misifit	trans-1,2-Dichloroethylene	100	ppb	
Total Coliform Bacteria	<5%	present or absent	Dichloromethane	5	ppb	
Fecal Coliform and E. coli	0		1,2-Dichloropropane	5	ppb	
Turbidity	π	NTU	Di (2-ethylhexyl)adipate	400	ppb	
Cryptosporidium	π	Calculated organisms/liter	Di (2-ethylhexyl)phthalate	6	ppb	
Radiological Contaminants		organisms/liter	Dinoseb	7	ppb	
Beta/photon emitters	4	mrem/yr	Dioxin [2,3,7,8-TCDD]	30	ppg	
Alpha emitters	15	pCi/l	Diquat	20	ppq	
Combined radium	5	pCi/l	Endothall	100	ppb	
Uranium	30	pCi/l	Endrin	2	ppb	
norganic Chemicals			Epichlorohydrin	Π	TT	
Antimony	6	ppb	Ethylbenzene	700	ppb	
Arsenic	10	ppb	Ethylene dibromide	50	ppt	
Asbestos	7	MFL	Glyphosate	700	ppb	
Barium	2	ppm	Heptachlor	400	pp*	
Beryllium	4	ppb	Heptachlor epoxide	200	ppt	
Cadmium	5	ppb	Hexachlorobenzene	1	ppt	
Chromium	100	ppb	Hexachlorocyclopentadiene	50	ppb	
Copper	AL=1.3	ppo	Lindane	200	ppt	
Cyanide	200	ppin	Methoxychlor	40	ppt	
Fluoride	4	ppo	Oxamyl [Vydate]	200	ppb	
Lead	AL=15	pph	Polychlorinated biphenyls (PCBs)	0.5	ppb	
Mercury	2	ppb	Pentachlorophenol	1	ppb	
Nitrate	10	ppp	Picloram	500	ppb	
Nitrite	1	ppm	Simazine	4	ppb	
Selenium	.05	ppm	Styrene	100	ppb	
Thallium	.002	ppm	Tetrachloroethylene	5	ppb	
Organic Contaminants	.002	ppin	Toluene	1	ppo	
	70	aab		3		
2,4-D	70	ppb	Toxaphene		ppb	
Acrylamide	Π	TT	2,4,5-TP(Silvex)	50	ppb	
Alachlor	2	ppb	1,2,4-Trichlorobenzene	.07	ppm	
Benzene	5	ppb	1,1,1-Trichloroethane	200	ppb	
Benzo(a)pyrene [PAHs]	200	ppt	1,1,2-Trichloroethane	5	ppb	
Carbofuran	40	ppb	Trichloroethylene	5	ppb	
Carbon tetrachloride	5	ppb	Vinyl Chloride	2	ppb	
Chlordane	2	ppb	Xylenes 10		ppm	
Chlorobenzene	100	ppb	Disinfectants & Disinfection Byproc	lucts		
Dalapon	200	ppb	Chlorine	4	ppm	
Dibromochloropropane	200	ppt	Chlorine Dioxide	800	ppb	
p-Dichlorobenzene	600	ppb	Chloramines	4	ppm	
p-Dichlorobenzene	75	ppb	Bromate	10	ppb	
1.2-Dichloroethane	5	ppb	Chlorite	1	ppo	
1,1-Dichloroethylene	7	ppb	HAA5 [Total haloacetic acids]	60	ppin	
cis-1,2-Dichloroethylene	70	ppb ppb	TTHM [Total trihalomethanes]	80		
ua-1,2-Diuliulueurylene	10	REGULATED CO		1 00	ppb	
1.1 Dichloropropens	Aldicar		Chloroform	Matel	ochlor	
1,1 - Dichloropropene				Metolachlor Metribuzin		
1,1,1,2-Tetrachloroethane	_	o Sulfone	Chloromethane	+		
1,1,2,2-Tetrachloroethane	_	o Sulfoxide	Dibromochloromethane		N - Butylbenzene	
1,1-Dichloroethane	Aldrin		· · · · · · · · · · · · · · · · · · ·		hthalene	
1,2,3 - Trichlorobenzene	_	benzene	Dicamba		N-Propylbenzene	
1,2,3 - Trichloropropane	Bromod	chloromethane	Dichlorodifluoromethane	0-Chl	O-Chlorotoluene	
1,2,4 - Trimethylbenzene	Bromod	lichloromethane	Dieldrin	P-Chlo	protoluene	
1,3 – Dichloropropane	Bromof	orm	Hexachlorobutadiene	P-Isop	P-Isopropyltoluene	
1,3 – Dichloropropene	Bromor	nethane	Isoprpylbenzene Propachlor		chlor	
1,3,5 - Trimethylbenzene	Butach				Butylbenzene	
2,2 – Dichloropropane	Carban				Butylbenzene	
3-Hydroxycarbofuran	Chloroe		MTBE	Trichlorfluoromethane		

As you can see by the Table of Detected Drinking Water Contaminants, our system had no violations. We have learned through our monitoring and testing that some constituents have been detected. We are pleased to report that our drinking water meets federal and state requirements.
